-- The MAILING DATE of this communication appears on the cover sheet with the correspondence address --  
**Period for Reply**

A SHORTENED STATUTORY PERIOD FOR REPLY IS SET TO EXPIRE 3 MONTH(S) OR THIRTY (30) DAYS, WHICHEVER IS LONGER, FROM THE MAILING DATE OF THIS COMMUNICATION.

- Extensions of time may be available under the provisions of 37 CFR 1.136(a). In no event, however, may a reply be timely filed after SIX (6) MONTHS from the mailing date of this communication.
- If NO period for reply is specified above, the maximum statutory period will apply and will expire SIX (6) MONTHS from the mailing date of this communication.
- Failure to reply within the set or extended period for reply will, by statute, cause the application to become ABANDONED (35 U.S.C. § 133). Any reply received by the Office later than three months after the mailing date of this communication, even if timely filed, may reduce any earned patent term adjustment. See 37 CFR 1.704(b).

**Status**

- 1) ☒ Responsive to communication(s) filed on 07 March 2008.  
2a) ☒ This action is **FINAL**. 2b) ☐ This action is non-final.

**DETAILED ACTION**

***Continued Examination Under 37 CFR 1.114***

1. A request for continued examination under 37 CFR 1.114, including the fee set forth in 37 CFR 1.17(c), was filed in this application after final rejection. Since this application is eligible for continued examination under 37 CFR 1.114, and the fee set forth in 37 CFR 1.17(c) has been timely paid, the finality of the previous Office action has been withdrawn pursuant to 37 CFR 1.114. Applicant's submission filed on 3/07/08 has been entered.

***Claim Rejections - 35 USC § 103***

2. The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

3. Claim 1 is rejected under 35 U.S.C. 103(a) as being unpatentable over Pate et al, US Patent No. 6,754,605.

Pate et al disclose a method and system for automating data storage array components testing with integrated work order dispatching comprising: a system 200 including an assembly line 204 on which a product 202 such as a data storage array component or the like may be transported and/or assembled, a buffer zone 230 where the product 202 may be kept temporarily a re-work station 240 where re-work may be performed on the product 202 after the product 202 fails a test, and two types of test cells where testing for the product 202 may be performed, a test cell 210 (Test Cell # 1) having a star configuration, and a test cell 220 (Test Cell # 2) having a ladder/magazine configuration, the test cell 210 may include a storage component

interface comprised of a plurality of storage component interface modules 214, a plurality of SAN targets 216 such as PCs, hosts, and the like communicatively coupled to the storage component interface, and a rotating carousel 212 for rotating the product 202 to face an appropriate storage component interface modules 214, the test cell 220 may include a storage component interface 222; as the product 202 continues down the assembly line, a RFID tag of the product 202 is be read by a RFID scanner 206 to determine a serial number of the product 202 (the serial number provides links to product information including test required) (see col. 2-3).

Pate et al fail to disclose or fairly suggest all the details/ method steps. However, since the structural limitations are as recited the method step is obtained, and, therefore, obvious. The structure of Pate et al is capable of performing all the method step set forth in the claim. An ordinary artisan would have been able to employ the system of Pate et al to perform the required method steps set forth in the claim. Therefore, it would have been an obvious extension as taught by Pate et al.
